SUMMARY

Analytics Engineer with 1.5+ years building governed data models and self-serve analytics across product, marketing, and operations. Owns end-to-end dbt + Snowflake transformation layers – dimensional models, tests, data contracts, and column-level lineage – plus scalable PySpark and SQL ELT pipelines. Translates ambiguous business questions into single-source-of-truth metric definitions and executive KPI dashboards in Power BI and Tableau, and partners with stakeholders to align on definitions and drive faster, data-backed decisions.

WORK EXPERIENCE

Frido	Pune, Maharashtra
Data Analyst – Analytics Engineering & Business Analytics	Nov 2025 - Present
- Own the dbt + Snowflake transformation layer end to end: medallion-style staging, intermediate, and dimensional (fact-dimension, slowly changing dimension) models with schema tests, data contracts, and column-level lineage, cutting manual reporting effort by over 30%. - Built and scheduled PySpark and SQL ELT pipelines on large-scale quick-commerce order and marketing data, with source-freshness checks and validation gates that reduced bad-data incidents reaching dashboards. - Defined single-source-of-truth metric definitions (revenue, retention, acquisition, campaign ROI) and a KPI framework, aligning product, marketing, and business stakeholders on shared numbers and eliminating conflicting metrics. - Designed executive Tableau dashboards on the modeled layer for self-serve funnel, cohort, and channel-attribution analysis, and applied forecasting and statistical analysis to surface growth opportunities.	
BT Group	Gurugram, Haryana
Analytics Engineer – Data & Business Intelligence	Dec 2024 - Nov 2025
- Modeled 50,000+ operational records into tested, documented SQL and Python transformation layers, running deep-dive analysis that identified inefficiencies and process bottlenecks and improved service-delivery outcomes. - Optimized complex SQL queries and data-processing pipelines, significantly improving reporting speed, warehouse efficiency, and data reliability for enterprise-scale users. - Built and maintained Power BI dashboards with a governed data model to monitor real-time KPIs, enabling leadership to track performance trends, spot risks early, and act proactively. - Established structured data-validation and reporting frameworks and supported forecasting and process-optimization initiatives, ensuring data integrity and consistent decision-making across operational teams.	
IBM	Remote
AI Engineer Intern	Jun 2024 - Jul 2024
Built SQL-based analytics pipelines and ML models (Random Forest, XGBoost) for classification and forecasting – feature engineering, validation, evaluation – and dashboards translating model outputs into business-oriented insights for non-technical stakeholders.	

PROJECTS

Governed dbt + Snowflake Analytics Platform	- Built a warehouse-native layer of 80+ tested dbt models on Snowflake with medallion architecture, incremental materializations, enforced data contracts, and GitHub Actions CI that blocks merges on failing tests or breaking schema changes. - Defined a central metrics/semantic layer with single-source-of-truth definitions for revenue, retention, and CAC/LTV – cutting ad-hoc metric requests ~40% – with column-level lineage and source-freshness alerting routing upstream breakages to owners before they hit executive reporting.
Real-Time Order & Marketing Analytics Pipeline	- Designed a streaming ELT pipeline ingesting ~2M daily order, clickstream, and campaign events into Spark Structured Streaming with schema-registry contracts, watermarked windows for late data, and a dead-letter queue; modeled the serving layer as incremental fact/dimension tables in Snowflake with exactly-once merge logic for sub-minute metric freshness. - Automated data-quality gates (row-count, null, distribution checks) and backfill jobs, cutting bad-data dashboard incidents by ~70% and reducing mean time to detect pipeline failures from hours to under 10 minutes.

TECHNICAL SKILLS

Analytics Engineering & dbt	: dbt (staging/intermediate/marts models, schema & data tests, sources, exposures, snapshots, macros, Jinja, incremental models), data contracts, semantic / metrics layer, source-freshness monitoring, column-level lineage, model documentation, medallion architecture (bronze/silver/gold)
SQL & Data Modeling	: Advanced SQL (window functions, CTEs, query optimization, performance tuning), dimensional modeling (fact-dimension, star schema), slowly changing dimensions, data grain design, data warehousing concepts
Data Platforms & Pipelines	: Snowflake (warehouses, RBAC, cost optimization, streams/tasks), PySpark, ELT/ETL pipeline development, Spark Structured Streaming, data integration & ingestion (API, JSON/CSV/Parquet), Python (Pandas, NumPy), automation scripting
Orchestration, CI/CD & Governance	: Airflow (exposure), dbt Cloud jobs, GitHub Actions CI/CD, Git & version control, data quality checks, data validation frameworks, testing & monitoring, pipeline observability
BI, Metrics & Business Analytics	: Power BI (DAX, data modeling, KPI dashboards), Tableau (interactive dashboards, storytelling), self-serve analytics, KPI framework design, metric definition & stakeholder alignment, exploratory data analysis (EDA), forecasting (ARIMA/SARIMA/LSTM), statistical analysis, funnel/cohort/attribution analysis, requirement gathering, cross-functional collaboration

EDUCATION

University of Petroleum and Energy Studies, Dehradun	2021 - 2025
B.Tech in Computer Science Business Analytics & Optimization
